

Mathematically Sane

Promoting rational reform of school mathematics

Why MathematicallySane.com?

There are at least two sides to every issue, including the so-called “Math Wars.”

- For too long, however, the public has heard primarily from the side of the traditionalists. MathematicallySane.com has been developed to balance the equation.
- For too long the case for reform has been unfairly characterized as “Fuzzy Math.” MathematicallySane has been created to provide an alternative – and more accurate - view of reform by making a compelling case that changes in our nation’s mathematics programs are imperative for our students’ future success and for the economic health of our nation.
- For too long there has been an insidious – and often unanswered – campaign to return mathematics instruction to the failed practices of the past. MathematicallySane has been developed to provide a broad array of evidence that reform initiatives have been successful and have raised student achievement in school districts across the country.

Accordingly, MathematicallySane's mission is to advocate – broadly and persuasively – for the rational reform of school mathematics. We seek to:

- Help educators, citizens and policy-makers at all levels make a stronger case for better mathematics programs;
- Gather and disseminate diverse success stories – both anecdotal and data-based; and
- Provide a forum for reform minded mathematics educators.

We have organized this information at <http://MathematicallySane.com>. We hope that you find this site supportive of your efforts to make mathematics work for ALL of America’s students. Send us your ideas and your feedback at mail@mathematicallysane.com.
